**DETAILED ACTION**

1. The following is an examiner's statement of reasons for allowance: the features of a stack of stationary sheets with slits offset from each other in adjacent sheets in independent claims 1 and 20 in combination with the other limitations of claims 1 and 20 distinguish over Spencer which does not teach stationary sheets and May which teaches offset apertures and edge notches not inboard slits. Regarding independent claim 21, again Spencer does not teach stationary sheets and May does not teach sheets which are identical except for offset slits in adjacent sheets which define over the cited references in combination with the other limitations of claim 21. Regarding the 103 rejection using May, putting circular apertures and edge notches in the admitted key holder would not produce the claimed offset slits. Haggerty is cited as being of interest as teaching offset slits in a rubber gasket application. Greven teaches offset adhesive strips in offset sheets. Method claims 13-19, which are dependent on the allowed article claims and thus have the same scope as the allowed claims are rejoined and the restriction requirement is withdrawn.
